Voobly Autodownloader 1.0 is a program specialized for downloading recorded games from Voobly site. Many people noticed that downloading recs from Voobly can be hard, and sometimes they wish to have some useful tool which can make it faster and easier. So, I tried to make something useful and help them enjoy in Voobly 100% 😬

How it works:

1. Open the program
2. Put path of SaveGame folder of your AOC
3. Open a recordings page of someone's profile

4. Put mouse cursor on a "Get Recording" link

5. Hold key "C" (for Mozilla and Opera users) or key "T" (for Microsoft Internet explorer users)of the keyboard *
**6.** Press right click of the mouse

Thats all^^, program will download the rec and unzip it to your SaveGame folder. To see downloads and recs:

7. Press on "Temp" button in the program to see where are zipped recs downloaded
8. Press on "Recs" button in the program to see your SaveGame folder and new downloaded rec unzipped inside
9. Repeat steps 4,5,6 as fast as you can, program will remember all links you asked to be downloaded and they will be putted in a order for downloading one by one). If recs are already downloaded and are not deleted by user from temp folder "downloads" under Autodownloader 1.0, they will not be downloaded again, but their copies will be unzipped and copied again to SaveGame (if don't exist there).

* Users which use other browsers or they notice holding "C" or "T" doesn't work on their computers (Voobly Autodownloader 1.0 don't download any rec), instead steps 4,5,6, they should do this:

4. Put mouse cursor on a "Get Recording" link
5. Press right click of the mouse
6. Press "Copy link address" or "Copy shortcut" with left mouse click

Holding "T" or "C" + right click will copy link address and send it via clipboard to the program in few miliseconds after right click, so effect of all is fast "surfing" through recordings pages and getting recs. Personally, I added to download 50 recs from voobly profile of a player in less than 1 minute. If you hear a nice sound of the program while you are adding links to download (added to program's folder as "accepted notify.wav") its a good sign all is going great. Also, if some versions of Mozilla, Opera, and IE change in future, right click with manually copying link address should always work, and the program will recognize voobly recorded game link form, so only voobly links with http://www.voobly.com/files/ will be added to the program's downloading row.

How to Install:

1. Unpack the attachment and put all files and sub folders to any location of PC (e.g. "C:\Program Files\Voobly Autodownloader 1.0\")
2. Put the path of the SaveGame folder of your AOC (its a location where downloaded recs will be unzipped, make sure it is correct, or put any other location which exists e.g "C:\")

3. Open "\winzip" sub folder under Voobly Autodownloader 1.0\ and double click to add "install winzip.reg" to registry, and clck "yes". *****
4. Start "autodownloader 1.0.exe"

Next test you need to do when you run the program for the first time:

5. Start "winzip32.exe" from "\winzip" sub folder and make sure it starts normally (without asking you to install it, or showing wizards screens for settings. This is important because unzipings of recs will not happen until WinZip starts normally at least once.) *****

* WinZip program is added to Voobly Autodownloader 1.0, and its needed because the program uses it to unzip records. If you don't install it properly and make sure it starts normally, unziping maybe will not work at all. If you already have WinZip installed, and you use it every day, don't add "install winzip.reg" to registry, just open "winzip32.exe" from "\winzip" sub folder to make sure it starts normally (it can show you tips on start, and its ok, it means it works). Adding "install winzip.reg" to registry will install WinZip quietly on or computer. In registry file are added serial number and several settings needed for WinZip works proper. Also, in registry file are added settings which say that WinZip will not change association of archive formats which are set to another packing/unpacking programs such is WinRar (zip and other formats will still open with WinRar) However, depending on Windows version, admin's rights, etc, this reg file sometimes fails, so when you make a test and still get some window which asks for installation of WinZip, just install it fallowing steps carefully, choose "Custom setup" and don't miss to uncheck "Associate WinZip with archives" or else all your arhives will start open with WinZip which you maybe dont want. Turning of updates for WinZip is recommended in this case. And after, when you start it first time (winzip32.exe from "\winzip" sub folder) enter the serial key from serial.txt (which can also be found in "\winzip" sub folder). It will maybe say during installation that some files are missing, but just ignore that and press ok/next/finish. Finlay, make sure "\winzip" started at least once properly from "\winzip" sub folder and you are ready to use Voobly Autodownloader 1.0

Ideas for next version: make less complicated "readme" Make the program independent of WinZip. Make a feature like "get all Voobly records of a player simply putting his Voobly nick into a text box the program".
